

**ABSTRACT OF THE DISCLOSURE**

5           An outdoor stool system for providing a portable seating structure capable of  
being utilized in various ground surface conditions. The outdoor stool system includes  
an elongate support member, a seat shaft slidably positioned within the support  
member, a seat member attached to the seat shaft, and a self-deploying base support  
that has a compact storage structure. The base support is comprised of a spike member  
10 along with a first member and a second member pivotally attached to a lower collar.  
The first member and the second member pivotally extend outwardly when the spike  
member is inserted into a ground surface thereby providing positional support to the  
seat structure.
